

① Package is implemented as .py file typically stored in the Lib. folder of Python installation path.

② A package usually consists of four things.

(a) Classes.

(b) Functions.

(c) Data objects.

(d) Sub-packages.

③

Built-in
Classes

Built-in
Function.

(a) Inside Python

Interpreter.

python.exe

(b) Inside Package

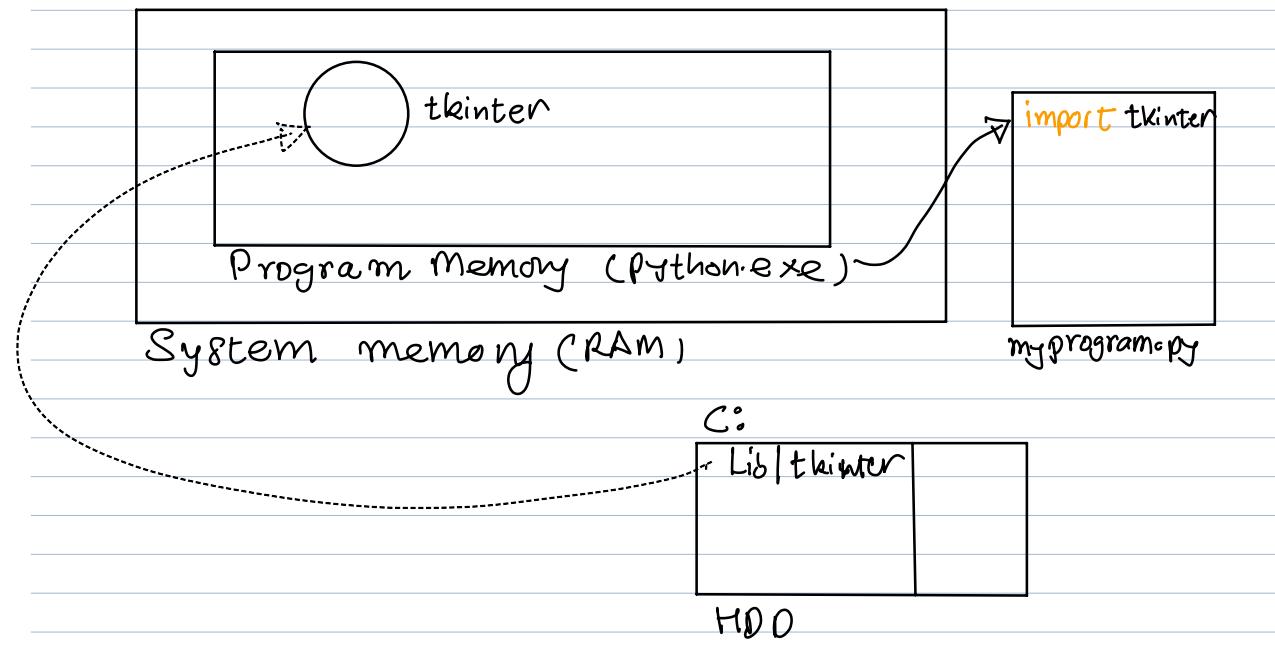

.py file in Lib
folder of Python

Installation path.

More likely to be

required by all

applications.

```
from tkinter import *
```

Variation of import statement

[import statement is used to load package from hard disk to program memory]

[import packagename].

[packagename.classname]

```
import sys
```

```
import os
```

```
import math
```

```
import numpy
```

```
import tkinter
```

```
import pandas
```

class

def
