

1) How to use a function/algorithm?

In order to use function / algorithm,
you have to "call it".

General Syntax:

The diagram illustrates the structure of a function call. It consists of three main components: a blue box labeled "function_name", an orange box labeled "input data", and a green box labeled "pair of round brackets/parenthesis". The "function_name" and "input data" boxes are connected by a dashed green line, indicating they are the arguments within the brackets. The "function_name" box is positioned to the left of the "input data" box, and the "pair of round brackets/parenthesis" box is positioned to the right of the "input data" box.

print (n)

Function name: print

Input data : n
